

**Project Title:** The Mill, Danby Low Mill, Middleham

**Client:** Professor Sharpe

**Project Details:**

This derelict building started out life as an old water mill sitting on the banks of the river Ure. We had to completely renovate and stabilise the building including a new roof, new heating and electrics and stunning kitchen with many of the old features retained. We not only repaired the original mill wheel but we also introduced a glass floor to show the original mill workings and retained the beautiful open beam roof structure which can be seen in the upper lounge. We also totally rebuilt the mill race which can now be used to relieve pressure when the river floods.

**Duration:** 9 Months

**Value:** £500,000.00
